#MobProgramming gets another well deserved shoutout and excellent quick intro by @lisihocke #agrs2018

This is the most important improvement I've seen the last couple of years.

Please get hold of me if you want to Especially if you think it's ineffective

Tweet übersetzen 11:33 vorm. · 20. Sep. 2018 · Twitter for iPhone

4/6 I've had a lot of experience with mob programming. I've introduced it to many teams, run workshops, seen its impact. It's one of the most significant improvements that a team can adopt. Most of the teams I've worked with love it, though not all.

Antwort an @BillyGarnet und @mcflyDev

I see Mob Programming as an improvement over Pair Programming. They're both useful, of course, but I've seen Mob Programming be successful in places where Pairing didn't work. Pair Programming is like going on a date. Mobbing is like having dinner with friends. Different dynamic.

### Agile, the working way.

Mob Programming Cheat Sheet Created by Coaches and Developers @IndustrialLogic

What is Mob Programming? "All the brilliant people working on the same thing, at the same time, in the same space, on "Mob Programming is continuous integration

There are many ways to successfully mob. In general, there is one computer, a keyboard and mouse, one or more monitors, a whiteboard, one Driver and one or more Navigators sharing a work environment like the one below:

deal Mob Size The whole team, although ams of 3-6 people is ideal. Beyond 6 people, a Image by Mark Pearl b may have difficulties keeping everyone aged. You can counter this with quicker

r's Role - The Driver operates the ter to input/implement ideas made by

Navigator(s) Role - Navigators direct the Driver. Usually it works to allow everyone in the Mob to interact directly with the Driver. If that causes too much chaos, have one Navigator give directions to the Driver and the Navigator serves as the voice of the Mob. Newbies to mobbing can ask for help on how to navigate.

Driver Dos & Don'ts • Drivers don't navigate. If the Driver is the

only one who knows what to do, they can

relinquish their role as Driver to the next Each Driver can share how they prefer to be directed, including asking questions about intent, location and details. Ultimately, navigators must communicate in a way that

allows the Driver to understand and take If no one is navigating, the Driver must stop

### Navigator(s) Dos & Don'ts

 Navigator ideas can only be programming by Navigators must pay attention to the Driver's skill level. If the Driver needs word-by-word instructions, the Mob must explain in detail what the Driver needs to do. If the Driver is more advanced, Navigators give higher-level instructions, like "commit it" or "move that method to the parent class". Over-navigating

entails too much too little. Don't sit and watch learns and contribute

- Mob Responsibilities
- Treat everyone with kind.
- Plan, discuss, research, and w on the whiteboard If a Driver begins to navigate and drive simultaneously, someone else in the Moo

- Keep the Mob going as people join or leave

 Stakeholders, Managers, Subject Matter Experts, etc. are welcome to join a Mob, but are not required to drive or navigate.

Leaving/Joining the Mob - It is fine for Someone to leave or join the Mo') for the ever reason. If they are a Drive, they eli iqui h thit role to the next person n line The Jerson leaving should tell the tuam when or if they'll return so that the team can adjust the rotation

Switching Drivers - The Driver switch over shouldn't take more than a few seconds. The teams should determine the best way to accomplish that goal. Switching Drivers is easiest when the Mob shares a single static and settings. If individuals in the
